

Condmaster®

INTEGRATION POSSIBILITIES

- Achieve additional dimensions with your Condmaster data
- Expand your measurement results with data from other systems
- Perform extended data analysis
- Process optimization for increased profitability and efficiency

A platform-independent communication protocol (industry standard) for the exchange of condition and process data, mainly for you who already have OPC UA in your IT environment.

Our powerful REST API enables Condmaster to act as a hub for condition monitoring data where other resources, systems or devices can access data for further processing or analysis.

A flexible function that can be used for expanding and customizing Condmaster with customer-unique, event-driven functions, as well as creating custom integrations with other IoT systems.
